

CELEBRATING?

Children evaluate the process

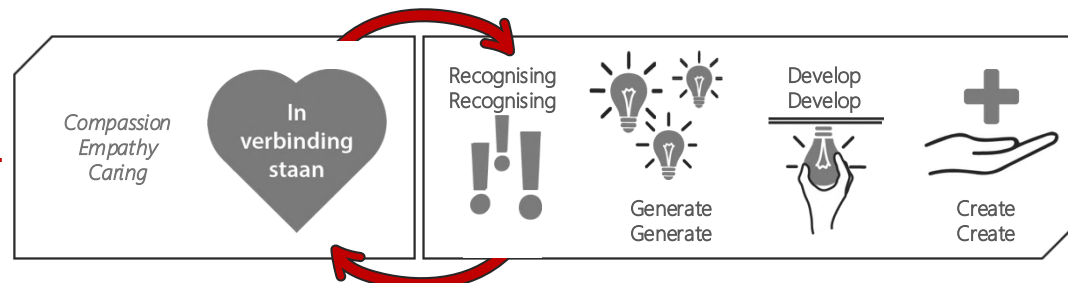

age 4 - 6

age 7 - 9

age 10 - 12

30 min

SUITABLE

- After completing a social entrepreneurship project.
- To learn lessons for the future.
- To learn to see/recognise/reinforce value.
- To decide whether the result has been achieved.

TIPS

- Make children explicitly aware of the difference they made.
- For 'sharing with others' consider local radio or a local newspaper. Give the target audience a voice. (see CLASS IN NEWSPAPER)
- Use a party meter for extra visualisation.

MATERIALS

A3 paper, markers or coloured pencils

Source: -

STEP 1

Prepare a fun 'party box' (containing party items such as party hats, a QR code linked to a playlist of party music, biscuits, etc.) and five inflated balloons.

STEP 2

Review the challenge/situation that the class worked on with the children using simple questions.

- If they succeed, a child may take a party item from the box.
- If there is still a chance to win, let a child pop a balloon.

STEP 3

Decide together whether:

- there are enough party items to celebrate. → Celebrate and be sure to share the result with others!
- many balloons have been popped. → Take additional action with the class or let the children think about how they can do better next time to achieve the goal (even) more effectively.

Example

CELEBRATING?

Context

It's springtime and we're learning about nature. The teacher reads a story about bees (e.g. Klimaatjes - Blij met een bij), but leaves out the ending for now. The children hear that the bees are having trouble finding flowers and are struggling to survive. The teacher also explains that by visiting flowers, bees do more than just produce delicious honey. Bees and other insects also provide many things that we buy in shops. With the help of the class puppet, the children came up with some ideas for helping the bees. They made seed bombs and threw them onto seed beds in the school garden.

• There are enough party supplies to celebrate → Celebrate and be sure to share the results with others!

• Many balloons have been popped.
→ Take additional action with the class or think with the children on how they can do it next time.

STEP 1

Provide a fun 'party box' (containing party items such as a party hat, a QR code linked to a playlist of party music, biscuits, etc.) and 5 inflated balloons.

STEP 2

Review the challenge of too few flowers for the bees with the children using simple questions.

- If they win, a child may take a party item from the box and you stick a party hat on the party meter.
- If there is still a chance open to do more, let a child pop a balloon.
 - Did we do what we wanted to do?
→ Yes! We wanted to help the bees by having more flowers. More flowers will grow from the seed bombs.
 - A child rummages in the party box. Stick a party hat on the first compartment of the meter.
 - What was easy to do? What was more difficult?
→ Making the seed bombs was a bit difficult, but we managed it.
 - A child rummages in the party box. Stick a party hat on the second box on the meter.
 - Did we make someone or something happier/better/more...
→ Yes! The bees now have more flowers and can make more food for themselves and for us in the shop.
 - A child rummages in the party box. Stick a party hat on the third box on the meter.
 - Have we told other people about our action? Who else could we tell and how?
→ No - We can tell our neighbours. Maybe we can also give them a seed bomb to get more flowers in their garden. → Pop a balloon.

....

STEP 3

Decide together, with the help of the party meter, whether there will be a party or whether further action is needed.
